Course Title
Ordinary Differential Equations

Course Number
MATH-UA 9262001

SAMPLE SYLLABUS – ACTUAL SYLLABUS MAY VARY

Instructor Contact Information
Mark de Longueville
mark.de.longueville@nyu.edu

Course Details
Spring 2016
Monday, 2:00pm - 4:45pm
Location of class: Academic Center, room “tba”

Prerequisites
MATH-UA 123 Calculus III or MATH-UA 213 Math for Economics III (for Economics majors)
and MATH-UA 140 Linear Algebra with a grade of C or better or the equivalent.

Units earned
4 credits

Course Description
This course is an introductory course to ordinary differential equations which includes analytical solution methods, elementary numerical methods, and modeling. Topics to be covered include first-order equations including integrating factors; second-order equations including variation of parameters; series solutions; elementary numerical methods including Euler's methods; Laplace transforms; systems of linear equations; boundary-value problems.

Course Objective
The course objective is to achieve an elementary knowledge of ordinary differential equations and to become more familiar with rigorous proofs in analysis.

Assessment Components
Presentation of the weekly or bi-weekly assigned homework (10%, participation is mandatory), midterm exam (40%) (90 minutes) and final exam (50%) (90 minutes).

Failure to submit or fulfill any required component may result in failure of the class, regardless of grades achieved in other assignments.
Assessment Expectations

Grade A: The student makes excellent use of empirical and theoretical material and offers well-structured arguments in his/her work. The student writes comprehensive essays / answers to exam questions and his/her work shows strong evidence of critical thought and extensive reading.

Grade B: The candidate shows a good understanding of the problem and has demonstrated the ability to formulate and execute a coherent research strategy.

Grade C: The work is acceptable and shows a basic grasp of the research problem. However, the work fails to organize findings coherently and is in need of improvement.

Grade D: The work passes because some relevant points are made. However, there may be a problem of poor definition, lack of critical awareness, poor research.

Grade F: The work shows that the research problem is not understood; there is little or no critical awareness and the research is clearly negligible.

Grade Conversion
Your instructor may use one of the following scales of numerical equivalents to letter grades:

- B+ = 87-89
- C+ = 77-79
- D+ = 67-69
- F = below 65

- A = 94-100
- B = 84-86
- C = 74-76
- D = 65-66

- A- = 90-93
- B- = 80-83
- C- = 70-73

Alternatively:

- A= 4.0
- A- = 3.7
- B+ = 3.3
- B = 3.0
- B- = 2.7
- C+ = 2.3
- C = 2.0
- C- = 1.7
- D+ = 1.3
- D = 1.0
- F = 0.0.

Attendance Policy
Participation in all classes is essential for your academic success, especially in NYU Berlin’s content courses that, unlike most courses at NYU NY, meet only once per week in a double-session for three hours. Your attendance in both content and language courses is required and will be checked at each class meeting. As soon as it becomes clear that you cannot attend a class, you must inform your professor by e-mail immediately. Absences are only excused if they are due to illness, religious observance or emergencies. If you want the reasons for your absence to be treated confidentially and not shared with your professor, please approach NYUB’s Director or Wellness Counselor. Your professor or NYUB’s administration may ask you to present a doctor's note or an exceptional permission from the Director or Wellness Counselor. Doctor's notes need to be submitted to the Assistant Director for Academics or the Arts Coordinator, who will inform your professors.

Unexcused absences affect students' grades: In content courses each unexcused absence (equaling one week's worth of classes) leads to a deduction of 2% of the overall grade and may negatively affect your class participation grade. Three unexcused absences in one course
may lead to a Fail in that course. In German Language classes three (consecutive or non-consecutive) unexcused absences (equaling one week's worth of classes) lead to a 2% deduction of the overall grade. Five unexcused absences in your German language course may lead to a Fail in that course. Furthermore, faculty is also entitled to deduct points for frequent late arrival to class or late arrival back from in-class breaks. Being more than 15 minutes late for class counts as an unexcused absence. Please note that for classes involving a field trip or other external visit, transportation difficulties are never grounds for an excused absence. It is the student's responsibility to arrive at the announced meeting point in a punctual and timely fashion.

Exams, tests, deadlines, and oral presentations that are missed due to illness require a doctor's note as documentation. It is the student's responsibility to produce this doctor's note; until this doctor's note is produced the missed assessment is graded with an F. In content classes, an F in one assignment may lead to failure of the entire class.

**Attendance Rules on Religious Holidays**
Members of any religious group may, without penalty, excuse themselves from classes when required in compliance with their religious obligations. Students who anticipate being absent because of any religious observance should notify their instructor AND NYUB's Academic Office in writing via e-mail one week in advance before being absent for this purpose. If examinations or assignment deadlines are scheduled on the day the student will be absent, the Director or Assistant Director will re-schedule a make-up examination or extend the deadline for assignments. Please note that an absence is only excused for the holiday but not for any days of travel that may come before and/or after the holiday.

**Late Submission of Work**
(1) Written work due in class must be submitted during the class time to the professor.

(2) Late work should be submitted in person to the instructor or to the Assistant Director for Academics, who will write on the essay or other work the date and time of submission, in the presence of the student. Another member of the administrative staff may also personally accept the work, and will write the date and time of submission on the work, as above.

(3) Unless an extension has been approved (with a doctor's note or by approval of the Director or Assistant Director), work submitted late receives a penalty of 2 points on the 100 point scale for each day it is late.

(4) Without an approved extension, written work submitted more than 5 weekdays following the session date fails and is given a zero.

(5) End of semester essays must be submitted on time.

(6) Students who are late for a written exam have no automatic right to take extra time or to write the exam on another day.

(7) Please remember that university computers do not keep your essays - you must save them elsewhere. Having lost parts of your essay on the university computer is no excuse for a late submission.

**Provisions for Students with Disabilities**
Academic accommodations are available for students with documented disabilities. Please contact the Moses Center for Students with Disabilities at 212-998-4980 or see their website.

**Plagiarism Policy**
The presentation of another person’s words, ideas, judgment, images or data as though they were your own, whether intentionally or unintentionally, constitutes an act of plagiarism. Proper referencing of your sources avoids plagiarism (see as one possible help the NYU library guide to referencing styles: http://nyu.libguides.com/citations).

NYUB takes plagiarism very seriously; penalties follow and may exceed those set out by your home school. All your written work must be submitted as a hard copy AND in electronic form to the instructor. Your instructor may ask you to sign a declaration of authorship form.

It is also an offense to submit work for assignments from two different courses that is substantially the same (be it oral presentations or written work). If there is an overlap of the subject of your assignment with one that you produced for another course (either in the current or any previous semester), you MUST inform your professor.

For a summary of NYU Global's academic policies please see: www.nyu.edu/global/academic-policies

**Recommended Text**
Any edition of the following textbook:

If you happen to find a cheap, used version, then I recommend getting it. However, all necessary materials will be provided in the class. No need to buy anything!

**Supplemental Texts**

**Internet Research Guidelines**
To be discussed in class.

**Additional Required Equipment**
Paper, pencil, brain.
Session 1 [1 February 2016]
Introduction, first examples, classification.

Session 2 [8 Feb 2016]
First order equations: linear and nonlinear equations, separable equations.

Session 3 [15 Feb 2016]
Existence and uniqueness theorem.

Session 4 [22 Feb 2016]
Second order linear equations: homogeneous equations with constant coefficients.

Session 5 [29 Feb 2016]
Second order linear equations: non-homogeneous equations, variation of parameters.

Session 6 [*** 4 Mar 2016 *** Make Up Class for 16 May]
Power series method: regular and singular points.

Session 7 [7 Mar 2016]
Power series method: regular and singular points (cont'd).

Session 8 [14 Mar 2016]
Systems of linear equations: matrix method, eigenvalues and eigenvectors, complex eigenvalues, repeated eigenvalues.

Session 9 [21 Mar 2016]
Systems of linear equations: matrix method, eigenvalues and eigenvectors, complex eigenvalues, repeated eigenvalues.

28 Mar 2016 - Spring Break – No Class!

4 Apr 2016 - Midterm exam

Session 11 [Friday, 11 Apr 2016]
Numerical methods: Euler method, truncation error, modified Euler method.

Session 12 [18 Apr 2016]
Nonlinear differential equations: phase plane, stability, examples.

Session 13 [25 Apr 2016]
Nonlinear differential equations: phase plane, stability, examples (cont'd).

Session 14 [2 May 2016]
Boundary value problems: Sturm-Liouville problems.

Session 15 [9 May 2016]
Final exam

Classroom Etiquette
Nothing beyond the usual.

Your Instructor
Mark de Longueville is professor of mathematics at the University of Applied Sciences HTW, Berlin. He is a specialist in the field of topological combinatorics. If this sounds interesting to you, you should check out his Springer textbook *A Course in Topological Combinatorics*.
