

# **BRIAN LEVINE**

**School of Medicine**

**M.D, May 2008**

**Columbia University**

**Obstetrics and Gynecology**

Dr. Brian Levine has been working closely with New York University on technological healthcare projects in Ghana. Brian has been featured in MobileActive.org, Voice of America News and Microsoft Health and Well-Being for MDNet, a technology-based project Brian started while a Reynolds Fellow. MDNet is a new communications network designed to facilitate easy contact among doctors and medical professionals in hard-to-serve regions of the developing world. To date, more than 90% of the doctors in Ghana are using the network and over 1,000,000 phone calls have been logged. MDNet Liberia was implemented in August 2008 and MDNET Rwanda is slated to begin implementation this spring. Earlier in the year, Brian was part of an NYU team awarded \$100k from Microsoft for their work. Brian is currently completing his residency in Obstetrics and Gynecology at Columbia University.
