This Fire Safety Handbook was prepared by the
New York University Environmental Health and Safety
14 Waverly Place, 2nd floor
New York, NY 10003

First Edition, March 2003
Updated, December 2006

Forward

The Fire Safety Handbook has been developed by Environmental Health and Safety to provide New York University faculty and staff with a ready source of information in regard to a fire emergency. The procedures set forth in this handbook have been designed for the protection of life and the minimization of property loss due to fire. However, a plan of action is only as effective as the people who carry out the procedures. The actions taken during the first minutes of a fire emergency are crucial to averting disaster. Therefore, all NYU Faculty members, Staff and teaching assistants are encouraged to review the Handbook and become familiar with the information that applies to their classroom, office and/or laboratory. In addition, all faculty and staff are asked to actively participate in fire drills, recognition of fire hazards, removal of such hazards whenever possible, and reporting of hazards when necessary. At the start of the new semester NYU Faculty members, Staff and teaching assistants are requested to remind students of fire exit locations and to exit the building using the staircases when an alarm is sounded.

Fire Alarm Policy

It is the policy of the University that when smoke or fire is discovered, the fire alarm must be sounded. Because of the potential for underestimating the seriousness of a fire condition, there are no exceptions to this policy.

When the building fire alarm sounds, every Faculty member, Staff and Student is expected to evacuate. (Those with disabilities should refer to General Fire Emergency Instructions on page 3.) The fire alarm consists of the sounding of four rounds of a coded signal. There is no code to indicate if an alarm signifies a drill or a real fire; therefore, every alarm must be treated as a potentially serious fire.

General Fire Emergency Instructions

IF YOU SUSPECT OR DISCOVER A FIRE

Pull The Nearest Fire Alarm

- Follow the instructions on the pull station. The alarm is automatically transmitted to the Fire Department.
- See pull-out poster for R.A.C.E.

Call Public Safety - from a safe location

- The Public Safety Department at the Dental Center can be reached at extension 8-9828. Public Safety personnel should be notified of the location of the smoke or fire condition, including the building, floor and/or room number and the name and telephone extension of the individual reporting the incident.
- Do not attempt to fight the fire.

Evacuate

- Upon hearing the alarm, Faculty members, Staff and Students must exit the building using the nearest exit. Follow the evacuation chart posted in every elevator lobby.
- Close all doors and windows to prevent the spread of fire and smoke. Leave lights on.
- Faculty, Staff, Visitors and Students should proceed quickly and calmly to the nearest stairway exit.
- Never use an elevator. Loss of power will trap you inside.
- Keep low to the floor to avoid smoke and toxic gases.
- Once in the stairway, proceed down to the first floor and exit the building. Move away from the building, out of the way of firefighters and other emergency personnel.
- Do not attempt or allow students or personnel to re-enter the building for any reason, until you are authorized to do so by the NYC Fire Department.

Fire Marshals

Follow the instruction of the building Fire Marshal. The Warden will provide guidance to students, personnel and visitors to go to the nearest exit and proceed to the street and away from the building.

- **You are requested to assist a person with disabilities.**
The person should either remain in the area or be relocated to an **area of rescue assistance**. (If the person is in Schwartz Building they should be moved to the Weissman Building and conversely the reverse if they are in the Weissman Building. Preferably to a room with an exterior window and a telephone.) **A Fire Marshal should be consulted to determine the best course of action.** The Public Safety Department should be called immediately and advised of the exact location of the person(s). If a telephone is not readily available, someone should go to the building entrance and notify the Public Safety Officer on duty of the exact location of the person(s). The Public Safety Department will inform the Fire Department of the location and a determination will be made if an evacuation is warranted. Only the Fire Department will attempt to evacuate the person(s) requiring assistance.

IF YOU SUSPECT OR DISCOVER A FIRE

In Clinics and not actively treating a patient

- Pull The Nearest Fire Alarm
- Close all doors and windows in the clinic.
- Evacuate visitors and patients who are not being treated.
- Do not remain in the clinic.
- Use the nearest exit stairway and the most direct route to the street.
- Do not use the elevators.
- Once you are out of the building, follow instructions of those in charge.

In Clinics and actively treating a patient

- Pull The Nearest Fire Alarm
- Remain in the clinic with your patient, unless there is smoke in the area.
- Close all doors and windows in the clinic.
- Remain calm and reassure your patient.
- Continue to treat your patient, as long as a member of faculty is present.
- If necessary, prepare your patient for evacuation.
- If there is smoke in the area, work with the Fire Marshals and the Clinic Chief to relocate the patient to a safe area (to the adjacent building if necessary).
- If the patient has family accompanying that need assistance such as young children personnel shall assist in their evacuation.

Remember **RACE** during fire

- **RESCUE**—Rescue people in immediate danger.
- **ALERT**—Pull fire alarm, dial emergency phone number.
- **CONTAIN**—Close all doors and windows.
- **EVACUATE/EXTINGUISH**—Evacuate building, extinguish small fires.

In the Rosenthal Institute and Bluestone Center and are not actively treating a patient

- Pull The Nearest Fire Alarm
- Help close doors and windows in the clinic.
- Remain calm and evacuate visitors and patients who are not being treated. You are requested to assist person with disabilities. The disabled individual should either remain in the area or can be relocated to the Schwartz Building.
- Do not remain in the clinic.
- Use the nearest stairway and the most direct to route to the street. Do not use elevators.
- Once you are out of the building, move away from the building and wait for further instructions from the NYC Fire Department or NYU Public Safety.

In Rosenthal Institute and Bluestone Center and are involved in patient care

- Pull The Nearest Fire Alarm
- Help close all doors and windows in the clinic.
- Remain in the clinic with your patient, unless there is smoke in the area.
- Remain calm and reassure your patient.
- Prepare your patient for evacuation and await further instructions.
- Patients will be evacuated, who are in immediate danger or when deemed necessary by the NYC Fire Department, attending dental faculty or nursing personnel. Otherwise patients and visitors are to remain in the patients operatories or rooms with the door closed and await further instructions from NYC Fire Department.
- Use the nearest stairway and the most direct to route to the street. Do not use elevators.
- Once you are out of the building, move away from the building and wait for further instructions from the NYC Fire Department or NYU Public Safety Department.

In Laboratories

- Pull The Nearest Fire Alarm
- If possible - Shut off all gas burning equipment; disconnect or switch off all electrical instruments and appliances with the exception of refrigerators and incubators. Close the windows and leave the lights on.
- If possible - Move pressurized gas cylinders to a safe area.
- Notify others of the fire as stated in the General Fire Emergency Instructions
- Evacuate

Animal Areas

- Pull The Nearest Fire Alarm
- If possible - Be sure all animals in your area are securely caged.
- If possible - Remove all animals in transit or in hallways to the nearest room. Be sure that cages are securely fastened.
- Notify others of the fire as stated in the General Fire Emergency Instructions
- Evacuate

IF YOU ARE TRAPPED

Don't Panic.

If a telephone is available, notify the Fire Department and/or NYU Public Safety of your exact location.

- Keep doors closed. Do not attempt to open a door without first feeling with the back of your hand. If the door is hot, try another exit. If no other exit is available, seal openings into the area with available materials.
- Signal firefighters from a window if possible.
- Stay close to the floor. If fresh air is needed open the window slightly at the bottom.
- Remain by the window until the Fire Department arrives.

How Fires Start

No Smoking

Smoking is permitted in specially designated areas only!

Fire is a chemical reaction involving rapid oxidation or burning of a fuel. It needs four elements to occur:

Fuel - Fuel can be any combustible material: solid, liquid or gas. Most solids and liquids must become a vapor or gas before they will burn.

Oxygen - The air we breathe is approximately 21% oxygen. Fire needs only an atmosphere with at least 16% oxygen.

Heat - Heat is the energy necessary to increase the temperature of the fuel to a point where sufficient vapors are given off for ignition to take place.

Chemical Reaction - A chain reaction can occur when the other three elements are present in the proper proportions and conditions. Fire occurs when this rapid oxidation, or burning takes place.

Take any one of these factors away, and fire cannot occur or will be extinguished if already burning.

Prevention Of Fires

CLASSIFICATION OF FIRES

Class A

Ordinary combustibles or fibrous material, such as wood, paper, cloth, rubber and some plastics.

Class B

Flammable or combustible liquids and gases such as gasoline, kerosene, paint, paint thinners and propane.

Class C

Energized electrical equipment, such as appliances, switches, panel boxes and power tools.

Class D

Combustible metals such as magnesium, titanium, potassium and sodium. Explosive reactions can result from using common extinguishing agents on fires involving Class D materials.

Class A - Ordinary Combustibles:

- Keep storage and work areas free of trash.
- Place oily rags and similar materials in covered metal containers away from sources of ignition.
- Empty all trash containers daily.

Class B - Flammable Liquids or Gases:

- Use flammable liquids and gases only in well ventilated areas.
- Keep flammable liquids and gases stored in tightly sealed, self-closing and spill-proof containers.
- Store flammable liquids and gases away from sources of ignition.
- Do not refuel gasoline powered equipment indoors.
- Clean up flammable liquid spills quickly.

Class C - Electrical Equipment:

- Check electrical equipment for old or worn wiring or broken, damaged fittings.
- Prevent overheating of electric motors by keeping them clean and in good working order.
- Never install a fuse rated higher than specified for a circuit.
- Don't plug more than one heat-producing appliance into an outlet.
- Never overload wall outlets. One outlet should have no more than two plugs.
- Investigate any appliance or electrical equipment that smells strange. Unusual odors can be the first sign of fire.

Class D - Combustible Metals:

- Always follow the material handling guidelines for the material in use, as specified by the supplier and the Material Safety Data Sheet (MSDS).

Every portable fire extinguisher displays the rating on the faceplate, indicating the class of fire on which it is designed to be effective. Some extinguishers may be marked with multiple ratings such as AB, BC or ABC. The majority of extinguishers available at the University are ABC. These can be used on all types of fires except combustible metal fires.

Class A Extinguishers - are effective on ordinary combustibles. The extinguisher cools the temperature of the burning material below its ignition temperature. These extinguishers may utilize water, foam or multi-purpose dry chemical agents.

Class B Extinguishers - are effective on flammable liquids or gases. Class B extinguishers may come in several types including foam, carbon dioxide, ordinary dry chemical, multi-purpose dry chemical, Halon or Halon replacements. This class of extinguisher stops a fire by removing the oxygen (smothering), preventing the vapors from reaching

the ignition source or inhibiting the chemical chain reaction.

Class C Extinguishers - are used specifically on fires involving energized electrical equipment. Extinguishing agents may be carbon dioxide, ordinary dry chemical, multi-purpose dry chemical, Halon or Halon replacements. Carbon dioxide, Halon and Halon replacements do not leave a residue and may be more desirable for use on computers and other sensitive electrical equipment. Never use water or other electrically conductive extinguishing agents on energized electrical equipment.

Class D Extinguishers - are used to extinguish combustible metals with powdered agents specifically designed for the material involved. In most cases the agent absorbs the heat from the burning material, cooling it below its ignition temperature.

Class K Extinguishers - are used in commercial kitchens and specifically designed to extinguish grease fires.

Operating a Portable Fire Extinguisher

A portable fire extinguisher should only be used in the early stages of a fire and only when it is safe to do so. If the fire is too large, or it is spreading and threatening to block your path of escape, leave the area immediately. If necessary, do not hesitate to use the extinguisher to clear an escape path. Always fight a fire with your back to your escape route. You should know how to use an extinguisher properly.

HOW TO USE AN EXTINGUISHER PROPERLY

Use the **PASS** method.

PULL, AIM, SQUEEZE, SWEEP.

(See pull-out poster.)

- P** Pull the pin
- A** Aim the extinguisher at the base of the flames
- S** Squeeze the trigger while holding the extinguisher upright
- S** Sweep the extinguisher from side to side, covering the area of the fire with extinguishing agent

⚠ Important

Choose the correct class of extinguisher for the fire situation. Never fight a fire alone.

Environmental Health and Safety

The Environmental Health and Safety Department is available to assist University offices with any fire safety concerns.

The department also provides environmental/occupational health & safety consulting services for the NYU Community.

The department web site at:

<http://www.nyu.edu/environmental.services/>

contains University guidelines for these issues.

For questions or additional information, call the Environmental Health and Safety (14 Waverly Place, 2nd floor) at (212) 998-1450.

How to Use a Fire Extinguisher

PASS

It's easy to remember how to use a fire extinguisher if you can remember the acronym PASS, which stands for PULL, AIM, SQUEEZE, and SWEEP.

Do not fight a fire alone. Always make sure a route of escape is available.

Pull the pin.

This will allow you to discharge the extinguisher.

Aim at the base of the fire.

If you aim at the flames (which is frequently the temptation), the extinguisher agent will fly right through and do no good. You want to hit the fuel.

Squeeze the top handle or lever.

This depresses a button that releases the pressurized extinguishing agent in the extinguisher.

Sweep from side to side

Until the fire is completely out. Start using the extinguisher from a safe distance away, then move forward. Once the fire is out, keep an eye on the area in case it reignites.
