New York University Global Fire Safety Guide

Introduction

This fire safety guide has been developed by NYU Environmental Health and Safety, in conjunction with NYU's global sites, in order to provide students studying away with a guide on how best to respond to a fire emergency, taking into account the wide array of facilities that the University leases and operates, as well as local laws and regulations. Should you have any questions or concerns about best practices in case of a fire emergency, please contact NYU Environmental Health and Safety, at +1.212.998.1450 or EHS-fire@nyu.edu, or the Residential Life Coordinator at (karen.welsch@nyu.edu).

Fire Alarm Policy

It is the policy of the University that when smoke or fire is discovered, the fire alarm, if present, must be activated. Because of the potential for underestimating the seriousness of a fire condition, there are no exceptions to this policy.

When the building fire alarm sounds **every** student, faculty, and staff member is expected to immediately follow the emergency procedures for their facility. Fire alarms systems vary throughout the global network. You should be familiar with the system type in the building(s) that you live and study in. At the NYU Berlin Student Residence, the smoke detectors in the hallways are directly linked to the fire department. If set off, they immediately issue a signal to the local fire department. Alarms from the smoke detectors inside the apartments are first registered at the guard desk. The guards on duty will immediately investigate the cause of the alarm and, in case it is not a fire, e.g. some smoke from cooking, set back the system so that the alarm does not go to the fire brigade.

Make sure you know where emergency exits, fire alarm boxes, fire extinguishers, and first-aid boxes are located in your building. There is no way of knowing if an alarm signifies a drill or an actual fire emergency; therefore, **every** alarm must be treated as a potentially serious fire.

Fire Drill Information

The University's global sites conduct fire drills throughout the year. Since fire drills are not announced, every fire alarm should be treated as an emergency and **all building occupants must follow their facility's emergency procedures.**

General Fire Emergency Instructions

Learn the Egress Routes

- Become familiar with the routes of egress before an emergency occurs.
- Make sure that you are familiar with the evacuation procedures and what is expected when there is a fire and the alarm is activated.
- Ensure that the routes of egress are free of all obstructions. Nothing should be stored in stairwells or obstructing the path of travel through hallways. If you do observe something blocking the path of egress, speak to your RA or another staff member and ask that it be removed immediately.
- Fire doors, where present, should be kept closed at all times and never propped open.

If You Suspect or Discover a Fire

- **Do not attempt to fight the fire unless it is necessary for your escape.**
- Activate the fire alarm by pushing the red fire alarm button in the red box.

Fire alarm boxes are located:

- in the Student Residence at both ends of each hallway,
 - in the Academic Center by the entrance doors on the first and second floors as well as by the emergency exits,
 - in NYU Berlin at St. Agnes by the entrance on the ground floor as well as by the main classroom on the first floor.
 - Follow the instructions on the device. If you cannot easily reach the fire alarm button, evacuate the building and call the fire department from a safe location.
- **Notify NYU Berlin staff by calling the NYU Berlin Emergency Phone number: +49 (0) 162 2155 979.**
 - We advise you to save the number in your phone for quick access in an emergency. Remember that you will find the important emergency numbers (police, fire department, NYU Berlin emergency number) on the back of your NYU ID.

New York University
Global Fire Safety Guide

- When notifying NYU Berlin staff, security personnel, or the fire department about a fire, please remember to share the following information:
 1. Address of building(s) where the fire is located.
 2. Floor number(s).
 3. Room number(s).
 4. Description of the fire.
 5. Your name.
- See sheet on R.A.C.E. response on page 8 of this guide.

Evacuate

- Upon hearing the alarm, **all occupants** must exit the building using the nearest safe means of egress.
 - Close all doors and windows as you evacuate to prevent the spread of fire and smoke. Leave lights on in case there are people behind you trying to evacuate.
 - Never use an elevator during a fire alarm activation.
 - Keep low to the floor to avoid smoke and toxic gases.
 - Once in the stairway, proceed down to the ground floor and exit the building.
 - If in the basement, exit building through the bike room towards the back of the building.
 - Move away from the building, and out of the way of firefighters and other emergency personnel.
 - Do not attempt to re-enter the building for any reason, until you are authorized to do so.
 - You are requested to assist persons with disabilities. The person should either remain in their room or be relocated to a designated area of rescue assistance, preferably a room with an exterior window and a telephone. The (NYU Berlin) site emergency number should be called immediately to advise of the exact location of the person(s). If a telephone is not readily available, ask a fellow student to go to the building entrance and notify the security staff or an NYU Berlin staff member of the exact location of the person(s). The security guard will inform the emergency responders of the location and the emergency responders will determine if an evacuation is warranted.
-

New York University
Global Fire Safety Guide

If You are Trapped

- **Don't Panic!**
- If a telephone is available, call the NYU Berlin emergency number.
- Keep doors closed. Do not attempt to open a door without first feeling with the back of your hand. If the door is hot, try another exit. If no other exit is available, seal openings into the area with available materials, such as wet towels.
- Signal firefighters from a window if possible.
- Remain by the window until the fire department arrives.

If Your Clothing Catches Fire

- **Don't Panic!**
- Stop where you are.
- Drop to the ground and cover your face with your hands.
- Roll around until the flames are extinguished.
- Seek immediate medical attention.

Smoking Policy

NO SMOKING

Follow all policies for your facility regarding if and where smoking is permitted.

Prevention of Fires

- Keep your living space free of trash; empty all trash containers daily.

Electrical Fire Safety:

- Never overload wall outlets. One outlet should have no more than two plugs.
- Never overload surge protectors or connect surge protectors in series; each surge protector should be plugged directly into an outlet.
- Always use UL listed surge protectors with circuit breaker protection, not power strips (Please note, it is important to check the information on a product when you purchase it).
- Do not use extension cords as permanent wiring.
- Check electrical equipment for old, worn, or damaged wiring or broken or damaged fittings.
- Investigate any appliance or electrical equipment that smells strange. Unusual odors can be the first sign of fire.

Cooking Fire Safety

- Do not leave cooking unattended, for any amount of time.
- Do not use water on grease fires, instead slide a pot lid over the burning pot.
- Do not tamper with smoke detectors.
- Follow all of the cooking instructions that are provided with the food and equipment.

Prohibited Items

- Non-University issued furniture (For additional information, please see the NYU Berlin handbook)
- Halogen lamps
- Candles or incense
- Hot plates
- Electric heaters or air conditioners
- Outdoor grills
- Any type of open flame or coil device
- Storage of flammable liquids
- Natural or artificial evergreens
- Explosives, fireworks, firearms, or ammunition

Automatic Fire Sprinklers

If your facility has fire sprinklers, there are some general practices that should be observed. Fire sprinklers should be kept clear of obstructions. Always maintain at least 18 inches (46cm) of clearance of all objects from the sprinkler to ensure proper operation of the sprinkler in an emergency. Objects should never be attached to or hung from sprinklers, as this impairs the function of the sprinkler and can result in an unintentional activation, which will cause severe flooding.

Portable Fire Extinguishers and Fire Blankets

Familiarize yourself with the locations of the fire extinguishers before an emergency occurs. Every portable fire extinguisher displays the rating on the faceplate indicating the class of fire that it is designed to be effective on.

The NYU Berlin Student Residence is equipped with two different kinds of fire extinguishers:

ABC fire extinguisher

The fire extinguishers in the hallways are for class A (solids), B (liquids) and C (gases) fires under the European classification system.

ABF fire extinguisher

The fire extinguishers in the apartments are especially designed for use on kitchen fires involving burning oil and fat. They are for class A (solids), B (liquids), and F (cooking oils and fats) fires under the European classification system.

Operating a Portable Fire Extinguisher

A portable fire extinguisher should only be used in the early stages of a fire and only when it is safe to do so. If the fire is too large, or it is spreading and threatening to block your path of escape, **leave the area immediately**. If necessary, do not hesitate to use the extinguisher to clear an escape path. Always fight a fire with your back to your escape route.

New York University
Global Fire Safety Guide

In an emergency situation you should know how to use an extinguisher properly. Become familiar with how to use the extinguishers at your facility before a fire occurs.

Important: Follow the instructions on the fire extinguisher and make sure it is the correct extinguisher for the material that is burning; if you are not sure, evacuate immediately.

Never fight a fire alone - If you must use a fire extinguisher to secure safe exit from the building, use the PASS method. PULL, AIM, SQUEEZE, SWEEP; however your best option may be to evacuate the building and inform the guards immediately.

P - Pull the pin

A - Aim the extinguisher at the base of the flames

S - Squeeze the trigger while holding the extinguisher upright

S - Sweep the extinguisher from side to side, covering the area of the fire with extinguishing agent

Remember RACE during fire

- **RESCUE** – Rescue people in immediate danger
- **ALERT** – Pull fire alarm, dial emergency phone number.
- **CONTAIN** – Close all doors and windows
- **EVACUATE** – Evacuate building, inform guards
