

Welcome to the NYU Connect TEST environment!

In the NYU Connect Test Environment, you can access and use all the features of NYU Connect without generating real data or emails to students and other users. Note that you may see some features that do not (yet!) exist in the Production environment in Test.

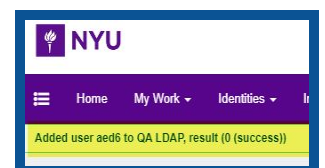

The below steps are for logging in to the [NYU Connect Test environment for the first time](#). Once you complete the steps, the next time(s) you can log in directly via this URL: <https://nyu-test.starfishsolutions.com/starfish-prod>

1. Connect to the **NYU VPN**.
2. **Navigate to** <https://identity.it.nyu.edu/identityiq/home.jsf> and enter your NYU credentials, if prompted.
3. Once logged in, go to the top left, and **click on the 3 lines icon** to the left of the "Home" button.
4. Once you click on the icon, a list of options will appear. Go to **"LDAP"**, click on the drop down arrow, and click on **"LDAP Prod to QA Sync"**.
5. After you click, the system will automatically update and refresh. When complete, you will see a **"Added user" message in the top left** hand of the screen with your NetID.

6. Now you can [go to the NYU Connect Test environment](#)
7. When prompted, enter your NYU credentials. **You are in!**

8. **Moving forward, you can log in to NYU Connect TEST directly**, without the VPN and without completing steps 1-5.
 - a. *Note! If you change your NYU password, you will need to repeat this process so the password update flows to Test. Otherwise you will need to log in to Test with your old credentials.*
